

RM-5430

1. Performance features

This instrument is a panel instrument for on-line monitoring of industrial process resistivity. It has HIGH, LOW control replay output function etc. It is an ideal auxiliary instrument for various types of pure water unit to monitor “water parameter”.

2. Main technical specifications

Measurement Range:	0~18.25M Ω •cm
Accuracy:	2.0%(FS)
Stability:	±2×10-3 (FS) /24h
Display:	3.5-bit LCD
Temperature Compensation:	Automatic temperature compensation based on 25℃
Auxiliary Electrode:	Plastic Structure; constant: 0.05cm-1; 1/2” pipe thread;10m length
Control Output Mode	HIGH, LOW (ON, OFF) relay output
Power Supply:	AC 220V±10% 50Hz
Environment conditions:	Temperature: 0-50℃
	Humidity: ≤85%RH
Dimensions:	96×96×130mm(Height×Width×Depth)
Slot Dimension for Installing:	92×92mm
